dogado Internet GmbH

IT-solutions from experts for experts

Over the last few years, the Dortmund-based dogado Internet GmbH has built up a solid national and international reputation as an Internet Service Provider. The young company concentrates especially on corporate clients. The services offered go far beyond the classical website-hosting and deliver an appreciable added value to the client.

They include, besides the basic services in the hosting sector, virtualisation, managed hosting, online backup, professional, web-based corporate communications as well as a highly efficient spam and virus protection. This portfolio and its diversity is also aimed at resellers who would like to offer their clients the innovative services of dogado Internet GmbH by means of the online platform **provider.BOX** under their personal control, name and layout.

The personal web-interface **provider.BOX** allows dogado Internet GmbH to provide its clients and partners with a fully automatic procurement and administrative system for virtual and dedicated servers, domain names, web hosting, spam and virus filters, exchange accounts, online backup and DNS-services. This is aimed especially at resellers such as computer retailers, providers or agencies.

Internet GmbH

The company

How it all started

As an Internet Service Provider with an excellent reputation, dogado Internet GmbH maintains, currently, more than 10,000 clients worldwide.

It all started with the multimedia agency crossconcept GmbH, that in 2006 decided to offer its customers additional website servicing. Due to the rapid development of this business segment, the proprietors decided without further ado to demerge. As a result, in 2006 the dogado Internet GmbH was founded. In 2007 the fusion then followed with the 2001 established miXus internetsolutions company

that was specialised in virtualization and managed servers. The direction of the company is currently shared between Dipl.-Ing., Dipl.-Wirt.-Ing. Stefan Lentz, Robin Tschoepe, Damian Gollak (BSc CMT) and Timo Mankartz.

The consistent growth of dogado Internet GmbH has continued since it came into being. Since its foundation, the dogado team has grown steadily and services, in the meantime, more than 10,000 customers with a domain inventory in the 5-digit region.

Success factor innovation

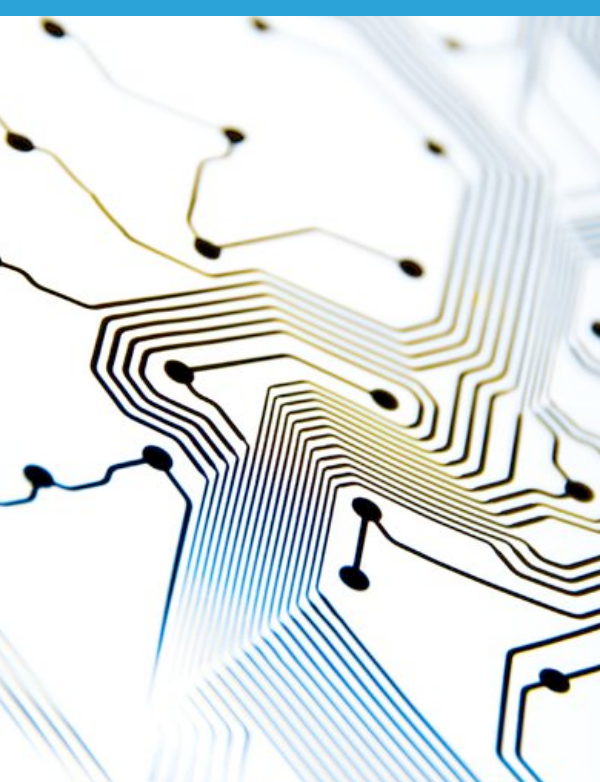

We plan for the future

What are the reasons for this success story? First and foremost, the consistently high quality demands that the owners place on themselves and on the company. This applies both to the proposed services and their technical implementation as well as the exemplary service that always takes centre stage at dogado.

The dogado Internet GmbH has its own infrastructure, an own autonomous system and routing-equipment located in Dusseldorf and Amsterdam. This infrastructure turns dogado Internet GmbH into one of the most reliable providers in Germany, it enables an availability quota of 99.99% on a yearly average and consequently offers its demanding corporate customers a large measure of security and redundancy from two separate and independent locations. Naturally, dogado Internet GmbH uses innovative technologies, the newest hardware from DELL and the most modern standards in all areas.

These attributes allow dogado Internet GmbH to be extraordinarily flexible and enable a multitude of specific IT solutions for their customers, even for unconventional projects.

The dogado network

Strong partners and satisfied customers

Also amongst the more than 10.000 global customers of dogado Internet GmbH are, of course, well-known names that for years have put their trust in the competent and reliable services of the company from Dortmund.

Individual products

Future-proof with certainty

dogado Online Backup

Whether due to defective hardware, operating errors, software malfunction, virus attacks or force majeure: once data is lost, it can often only be restored at substantial expense of time and money - if at all. In any case, enormous tangible and intangible damage occurs, that can often lead to the demise of a company. Protect your company from severe financial damage due to loss of data, **dogado Online Backup** offers the optimal solution for your data protection.

dogado housing and colocation

Connectivity of high quality and high availability are determining competitive factors for any company that offers Internet information and services. For this demanding target group, dogado Internet GmbH provides a redundant backbone-connection based on its own infrastructure from the locations Dusseldorf and Amsterdam. Of course, this includes 24/7 support and competent backing for the realisation of all kinds of projects - from a single server right up to a complete individual solution.

dogado hosting

Parallel to the classical solutions from the sectors web hosting, virtualisation and dedicated servers, dogado also offers its clients individual tailor-made IT concepts that are needed for the realisation of complex hosting projects. Within this so-called managed hosting sector one finds, amongst others, complex cluster and storage solutions, load balancing or firewalls. Of course, quality hardware from DELL is used for all hosting solutions.

dogado Hosted Exchange

Efficient communication and the seamless integration of planning and coordination processes belong to the elementary success factors of modern companies. **dogado Hosted Exchange** based on Microsoft Exchange 2007 technology enables you to organise e-mails, calendar, contacts and documents independent of where you are at any given moment or on which communication equipment you would like to access your data.

dogado Spam Control

Every e-mail address holder knows the problem, the longer a mail address is used the more the spam that finds its way daily into the inbox. Useless e-mails block important messages, take up storage space and steal valuable work time. **dogado Spam Control** protects your e-mails for threats such as viruses, spam or phishing-attacks by means of an innovative combination of preventive and reactive protective measures.
